Baseline
Conditions

11 Working
Group Meetings:
Sept 18-27

Goal of the First Meeting:

To review and develop shared understanding of the characteristics of these watersheds, the work done to date, existing data and information available, and how to apply all of this to planning for water quality improvements for these watersheds moving forward.

11 Working
Group Meetings:
Oct 21-Nov 5

Goal of Today's Meeting:

To develop a shared understanding of the potential technologies and approaches identified to date, and the benefits and limitations of each; to explore the environmental, economic, and community impacts of a range of categories of solutions; and to identify priorities and considerations for applying technologies and approaches to remediate water quality impairments in your watershed.

Technologies and Approaches for Improving Water Quality

Technologies and Approaches for Improving Water Quality

- ❑ The Fact Sheets present various information on the technologies being considered.
- ❑ Additional information is contained on the Technology Matrix including the following:
 - Site Requirements
 - Construction, Project and Operation and Maintenance Costs
 - Reference Information
 - Regulatory Comments
- ❑ Input from the Stakeholders is requested regarding a technology's Public Acceptance

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.
- ❑ Not all of the technologies and approaches will be applicable to Cape Cod.

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.
- ❑ Not all of the technologies and approaches will be applicable to Cape Cod.
- ❑ Some technologies are so promising that we should identify them for demonstration and pilot projects.

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.
- ❑ Not all of the technologies and approaches will be applicable to Cape Cod.
- ❑ Some technologies are so promising that we should identify them for demonstration and pilot projects.
- ❑ Workshop 3 will embark on hands on problem solving in each watershed to meet target load reductions.

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.
- ❑ Not all of the technologies and approaches will be applicable to Cape Cod.
- ❑ Some technologies are so promising that we should identify them for demonstration and pilot projects.
- ❑ Workshop 3 will embark on hands on problem solving in each watershed to meet target load reductions.
- ❑ Certain technologies or approaches will be effective at **preventing** nutrients from entering the water body. Others will be effective at **reducing** or **remediating** nutrients that are already in the groundwater or water body.

Technologies and Approaches for Improving Water Quality

- ❑ Comprehensive analysis of nutrient control technologies and approaches.
- ❑ Not all of the technologies and approaches will be applicable to Cape Cod.
- ❑ Some technologies are so promising that we should identify them for demonstration and pilot projects.
- ❑ Workshop 3 will embark on hands on problem solving in each watershed to meet target load reductions.
- ❑ Certain technologies or approaches will be effective at **preventing** nutrients from entering the water body. Others will be effective at **reducing** or **remediating** nutrients that are already in the groundwater or water body.
- ❑ Regulatory programs can address nutrient controls for both existing development and future development.

Measuring Oysters' Improvements on Water Quality

Overall project area with new caulk

Oyster Spawning Area (2.04 acres)

New type of traction caulk (small black patches)

132 Meter

- already 2-3 million additional oysters
- past: 5,000 pounds of nitrogen removed per year
- likely increase in commercial shellfish value of \$1 million/year
- increased water filtration approximately 100 million gallons/day
- erosion control
- sediment reduction
- increased mean, red, juvenile fish habitat

Transfer of Development
Rights

TDR

Transfer of Developments Rights

The Concept

Owner of "sending" parcel sells development rights in exchange for permanent conservation easement.

Owner of "receiving" parcel buys development rights to build at densities higher than allowed under base zoning.

Other Wastewater Management Needs

- A. Title 5 Problem Areas
- B. Pond Recharge Areas

Low Barrier to Implementation

- A. Fertilizer Management
- B. Stormwater Mitigation

Watershed/Embayment Options

- A. Permeable Reactive Barriers
- B. Inlet/Culvert Openings
- C. Constructed Wetlands
- D. Aquaculture

Alternative On-Site Options

- A. Eco-toilets (UD & Compost)
- B. I/A Technologies
- C. Enhanced I/A Technologies
- D. Shared Systems

Priority Collection/High-Density Areas

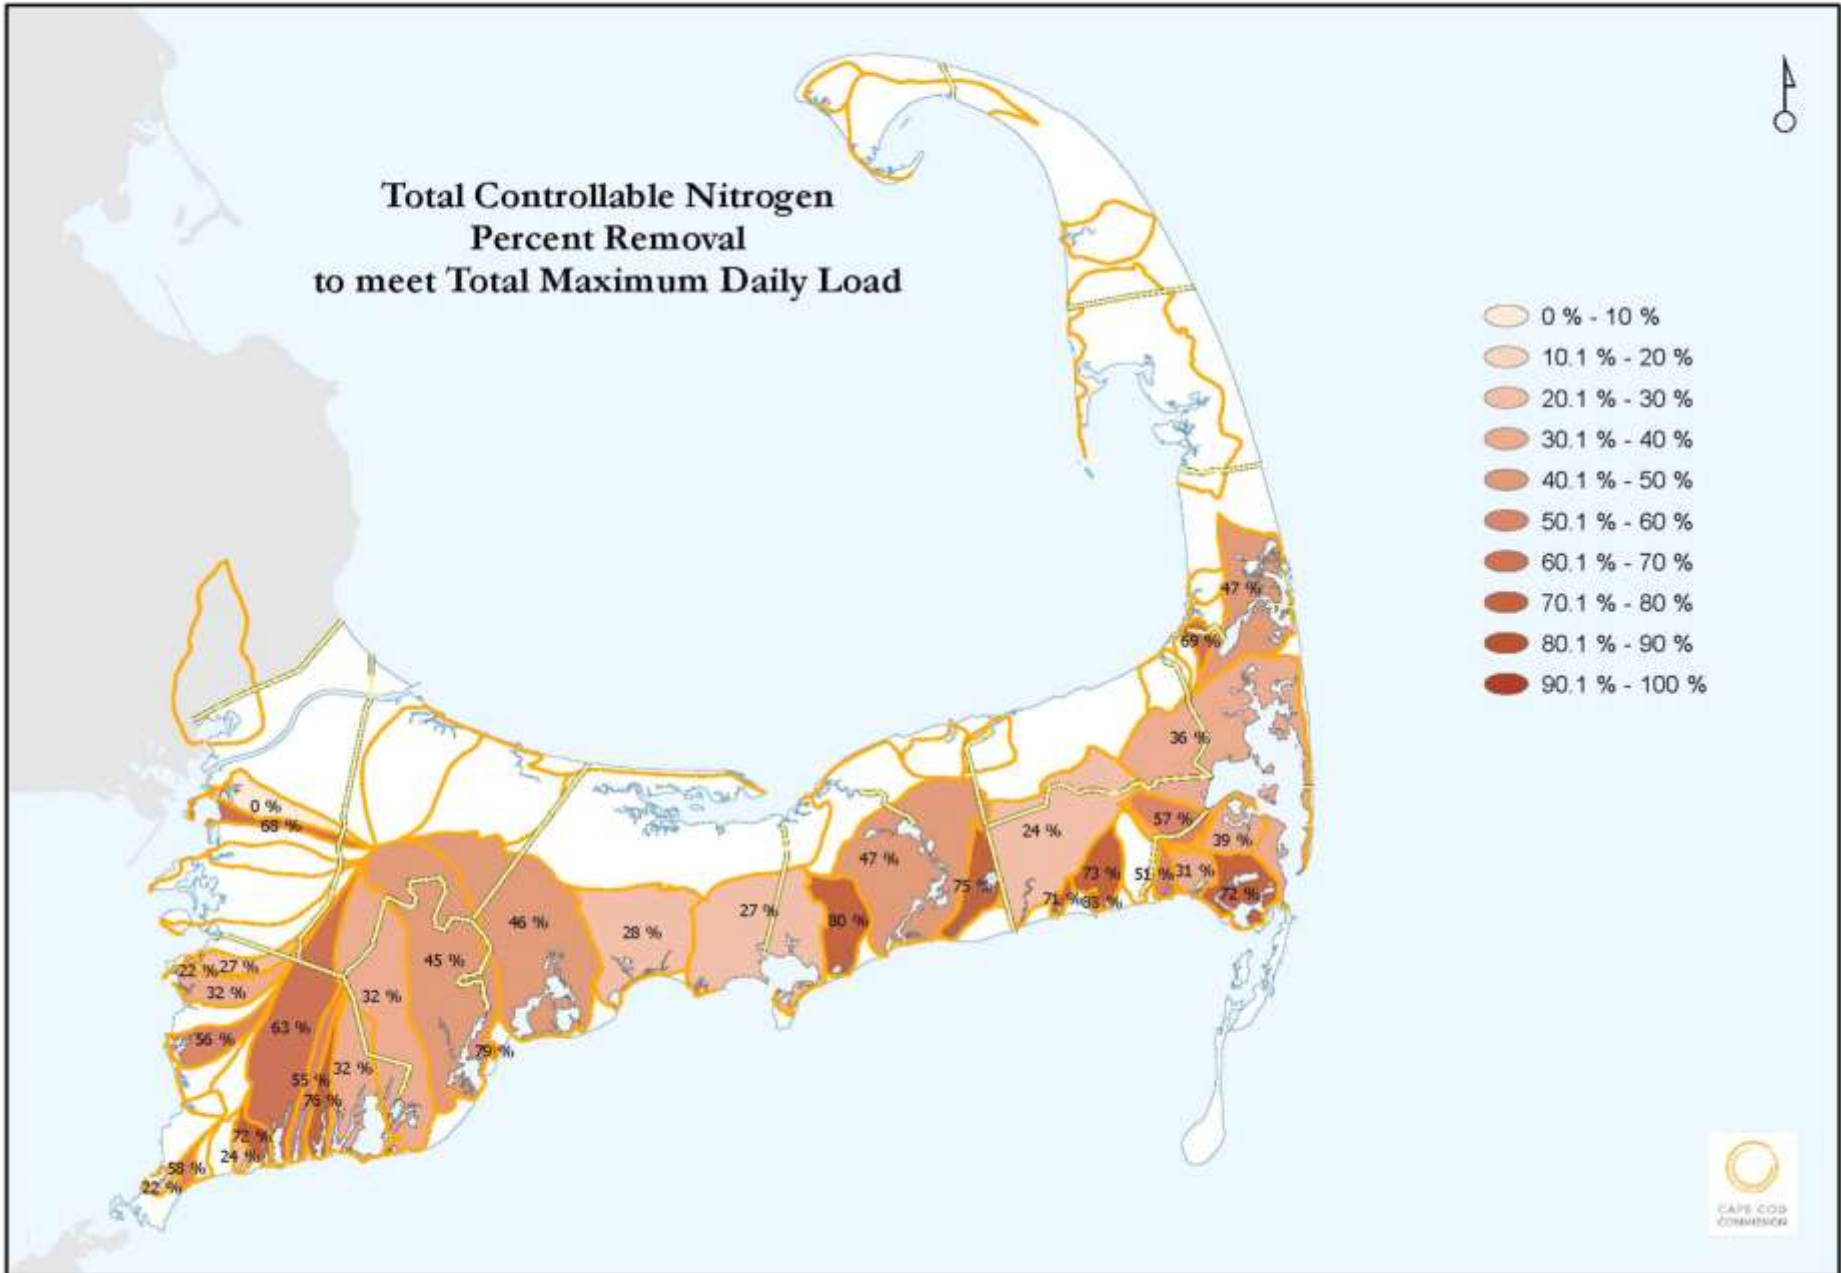

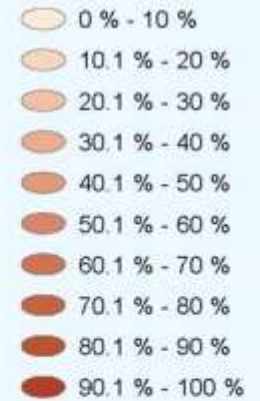

- A. Greater Than 1 Dwelling Unit/acre
- B. Village Centers
- C. Economic Centers
- D. Growth Incentive Zones
