Scenarios

11 Working  
Group Meetings:  
Dec 2-11

## Goal of Today's Meeting:

- To discuss the approach for developing watershed scenarios that will remediate water quality impairments in your watersheds.
- To identify preferences, advantages and disadvantages of a set of scenarios of different technologies and approaches, and
- To develop a set of adaptive management principles to guide sub-regional groups in refining scenarios for the 208 Plan.

## Targets/Reduction Goals

**Present Load:** X kg/day **−** **Target:** Y kg/day **=** **Reduction Required:** N kg/day

## Other Wastewater Management Needs

- A. Title 5 Problem Areas
- B. Pond Recharge Areas
- C. Growth Management

## Low Barrier to Implementation

- A. Fertilizer Management
- B. Stormwater Mitigation

## Watershed/Embayment Options

- A. Permeable Reactive Barriers
- B. Inlet/Culvert Openings
- C. Constructed Wetlands
- D. Aquaculture

## Alternative On-Site Options

- A. Eco-toilets (UD & Compost)
- B. I/A Technologies
- C. Enhanced I/A Technologies
- D. Shared Systems

## Priority Collection/High-Density Areas

- A. Greater Than 1 Dwelling Unit/acre
- B. Village Centers
- C. Economic Centers
- D. Growth Incentive Zones

## Supplemental Sewering

# Targeted Centralized Treatment after Applying Alternative Strategies (1069 kg N/yr)

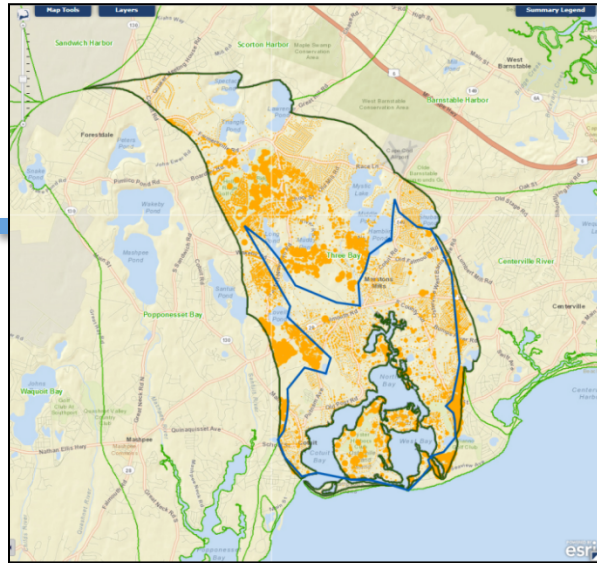

# Scenario Comparison

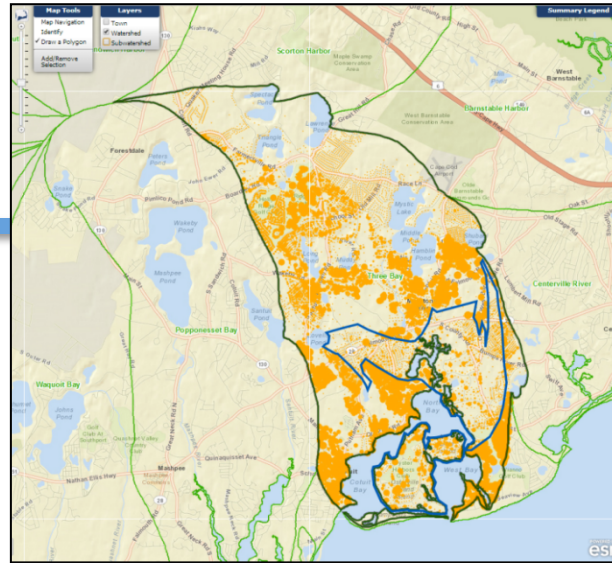

## Targeted Collection

## Targeted Collection after a 50% reduction in fertilizer and stormwater

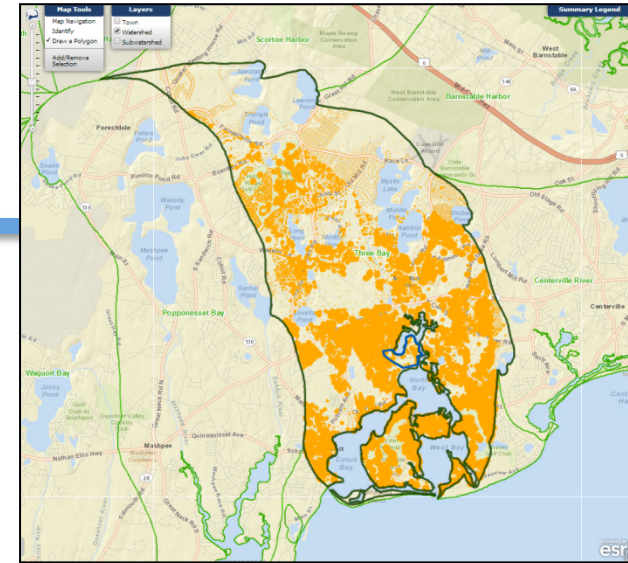

## Targeted Collection after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

- Achieves TMDL<sup>1</sup>
- Cost/lb N = \$405
- Treated Flow = 667,000 gpd

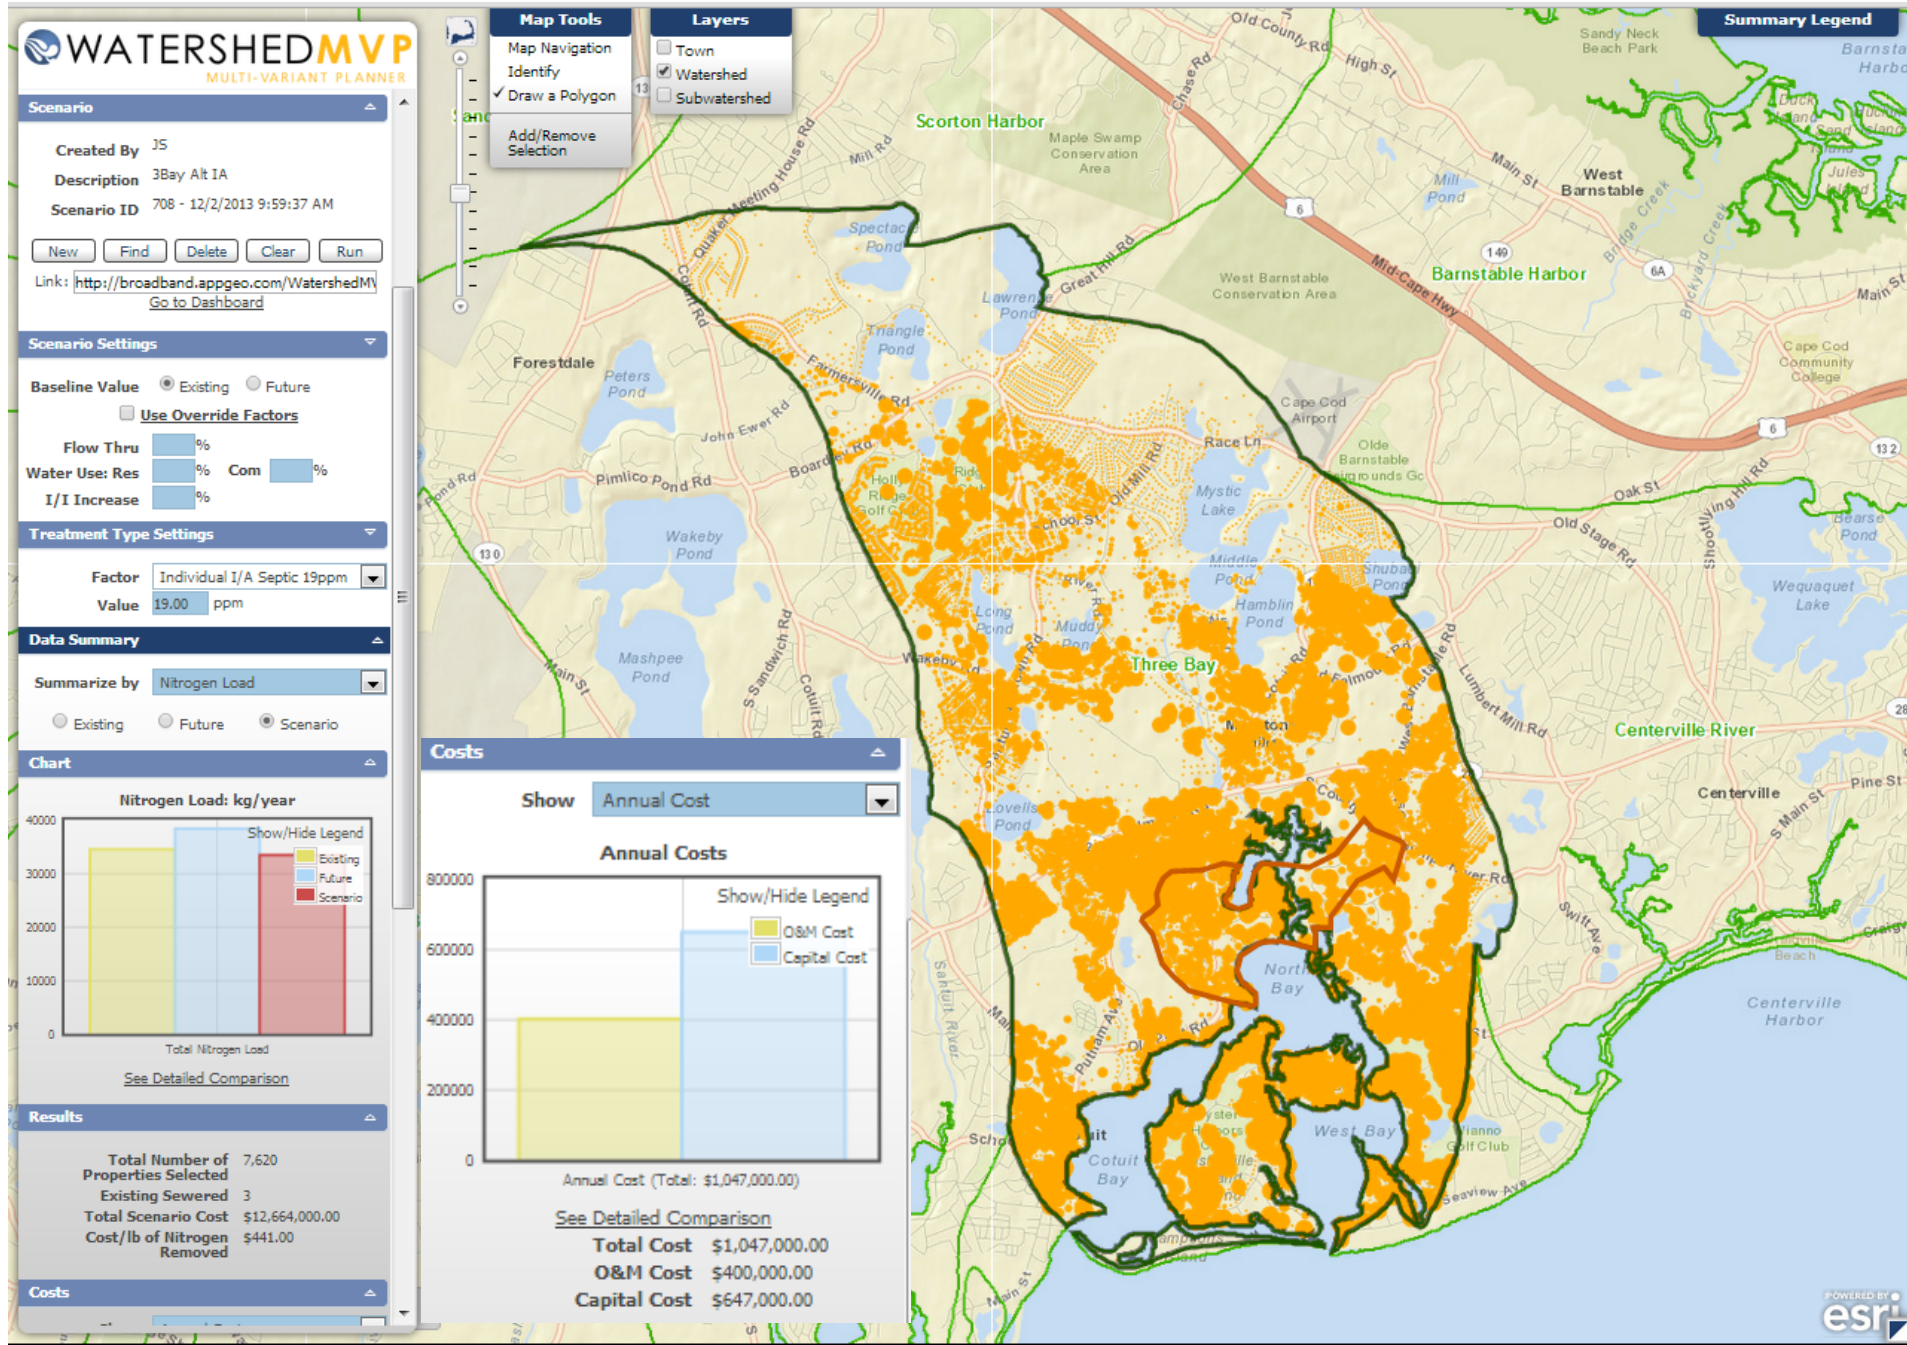

- Achieves TMDL<sup>1</sup>
- Cost/lb N = \$373
- Treated Flow = 440,000 gpd

- Achieves TMDL<sup>1</sup>
- Cost/lb N = \$519
- Treated Flow = 24,000 gpd

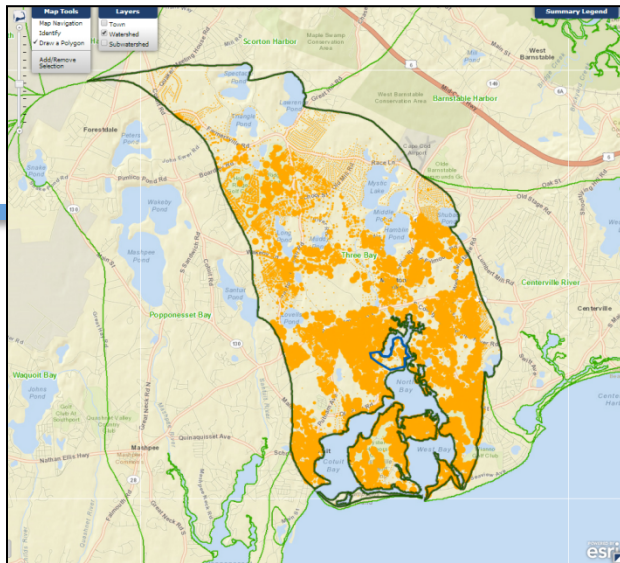

<sup>1</sup> within 5% of goal

# Innovative/Alternative On-Site Systems after Applying Alternative Strategies (1069 kg N/yr)

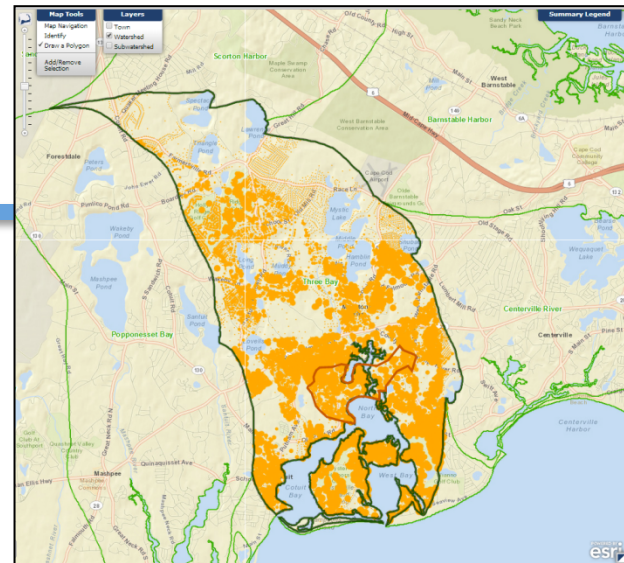

# Scenario Comparison

Targeted Collection after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

- Achieves TMDL<sup>1</sup>
- Cost/lb N = \$519
- Treated Flow = 24,000 gpd

Innovative/alternative on-site systems after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

- Achieves TMDL<sup>1</sup>
- Cost/lb N = \$441
- Treated Flow = 92,000 gpd

<sup>1</sup> within 5% of goal

## *Adaptive Management:*

A structured approach for addressing uncertainties by linking science and monitoring to decision-making and adjusting implementation, as necessary, to increase the probability of meeting water quality goals in a cost effective and efficient ways.

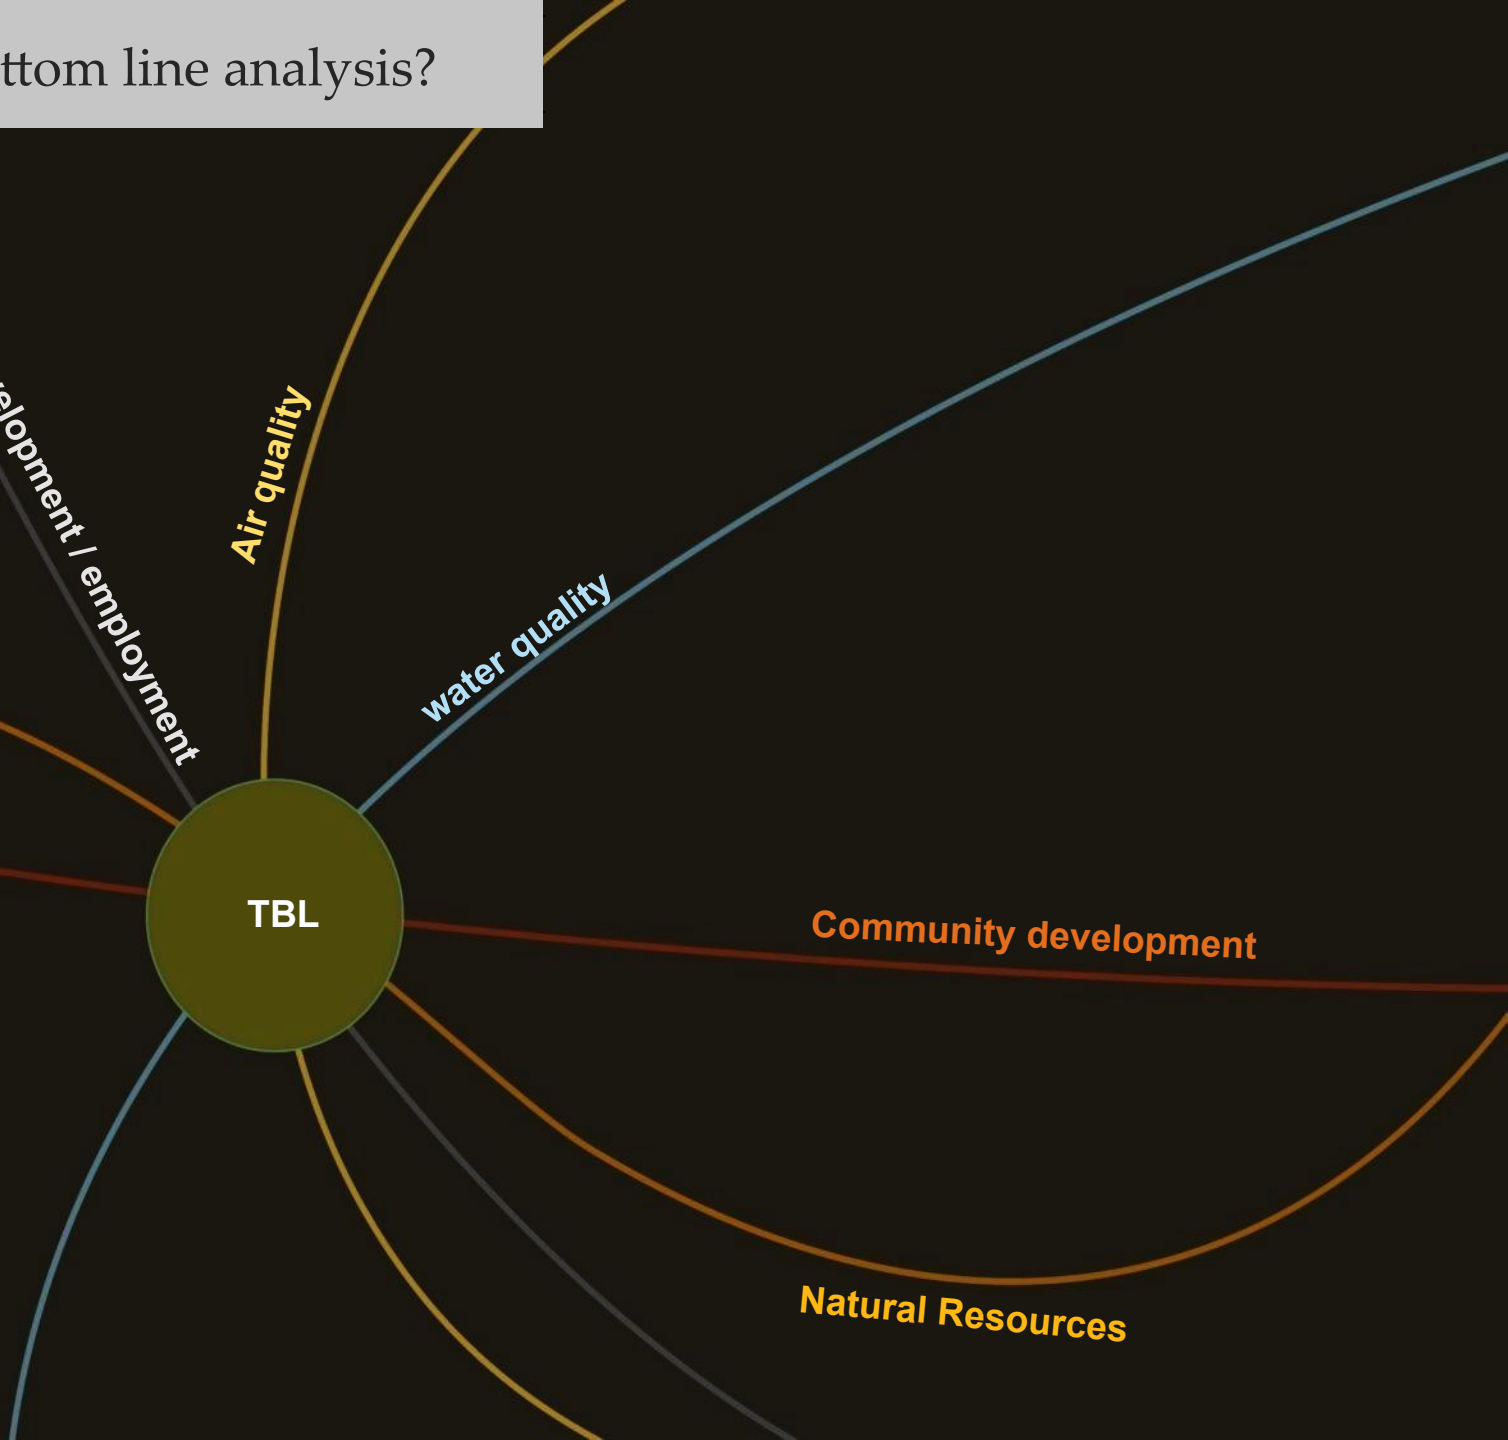

# Triple Bottom Line (TBL) Introduction

---

# What is triple bottom line analysis?

Triple Bottom Line Analysis  
Provides a full accounting of the financial, social, and environmental consequences of investments or policies

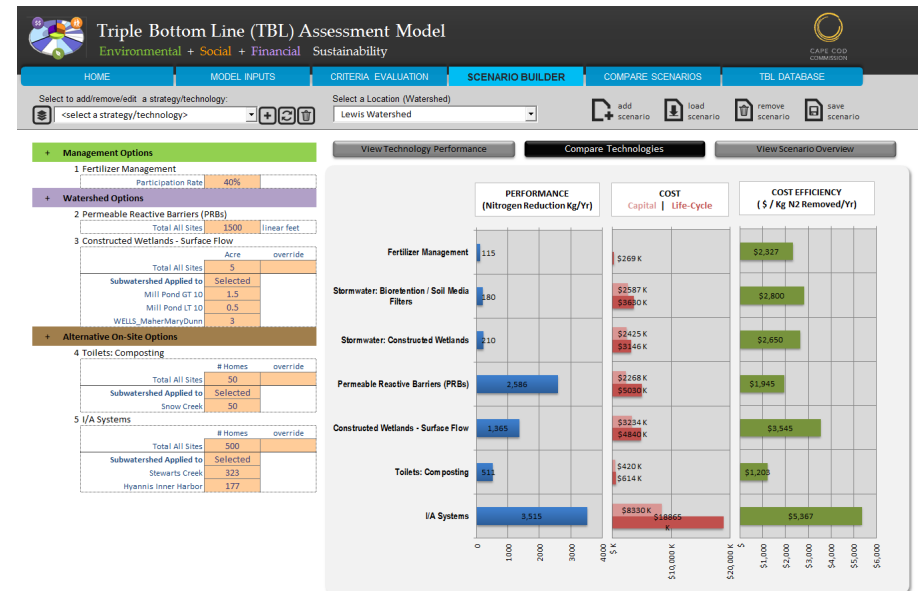

Often "TBL" analysis is used to identify the best alternative and to report to stakeholders on the public outcomes of a given investment.

# Why develop a TBL model?

- To consider the financial, environmental, and social consequences of water quality investments and policies in Cape Cod.
- TBL Model evaluates the “ancillary” or downstream consequences of water quality investments not the direct Phosphorous or Nitrogen levels.

# Triple Bottom Line (TBL) Assessment Model
