

## Lewis Bay to Bass River Group

### Watershed Scenarios

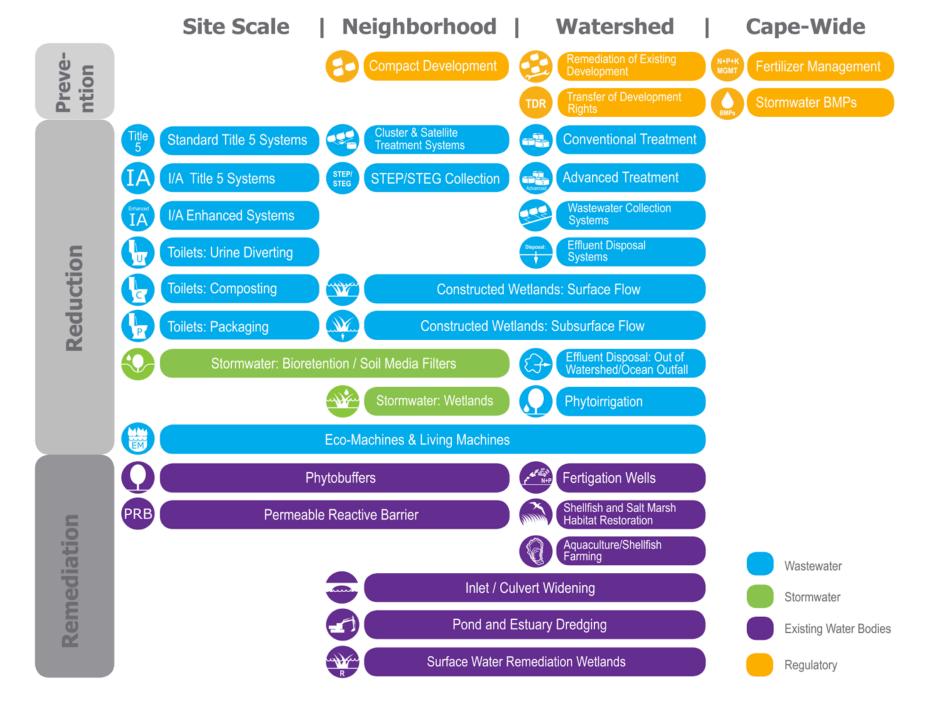

**Regulatory, Legal & Institutional Work Group** 

TAC

Technical Advisory Committee of Cape Cod Water **Protection Collaborative** 

## **208 Planning Process**

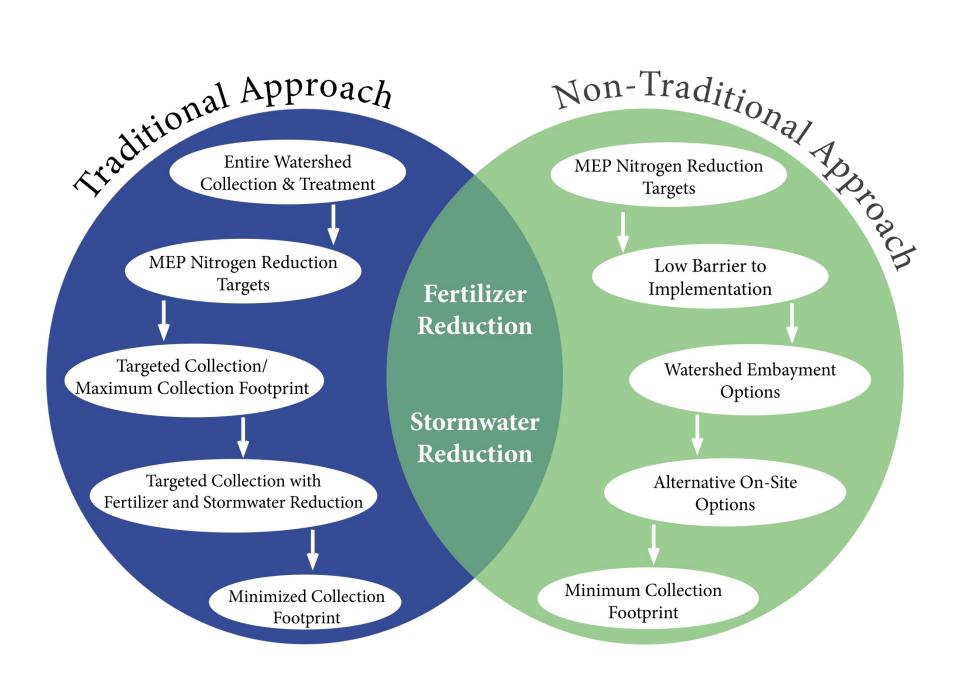

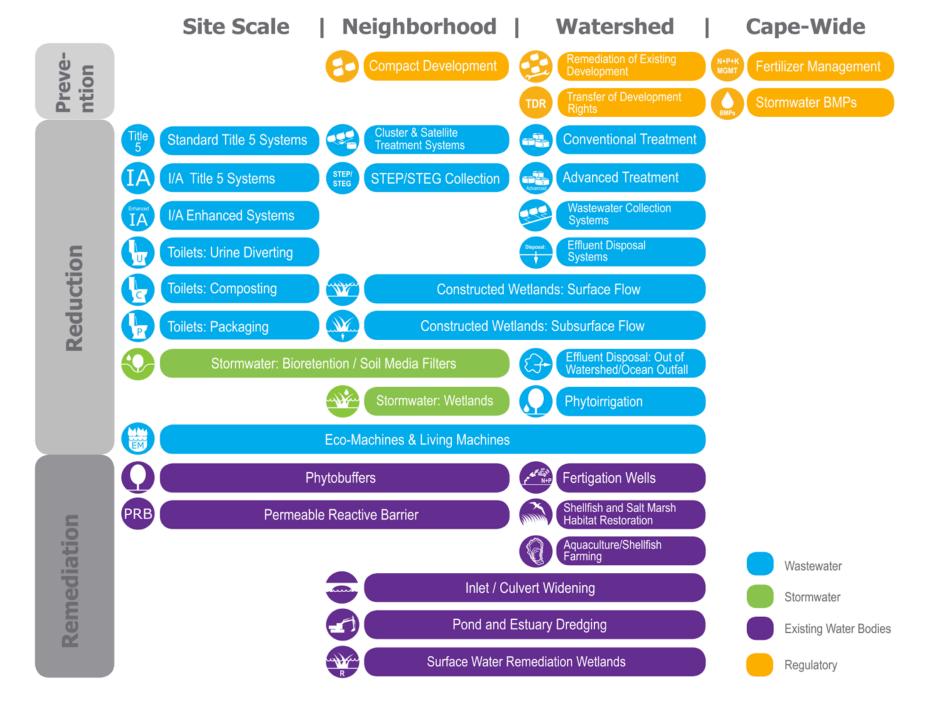

**Goal of Today's Meeting:** 

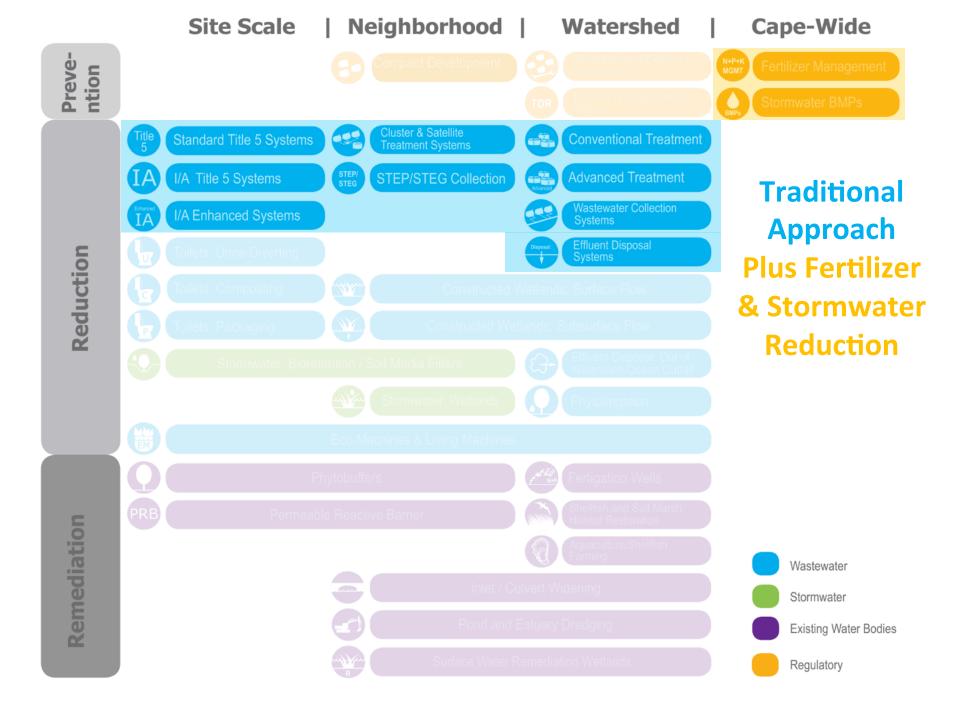

- To discuss the approach for developing watershed scenarios that will remediate water quality impairments in your watersheds.
- To identify preferences, advantages and disadvantages of a set of scenarios of different technologies and approaches, and
- ➤ To develop a set of adaptive management principles to guide subregional groups in refining scenarios for the 208 Plan.

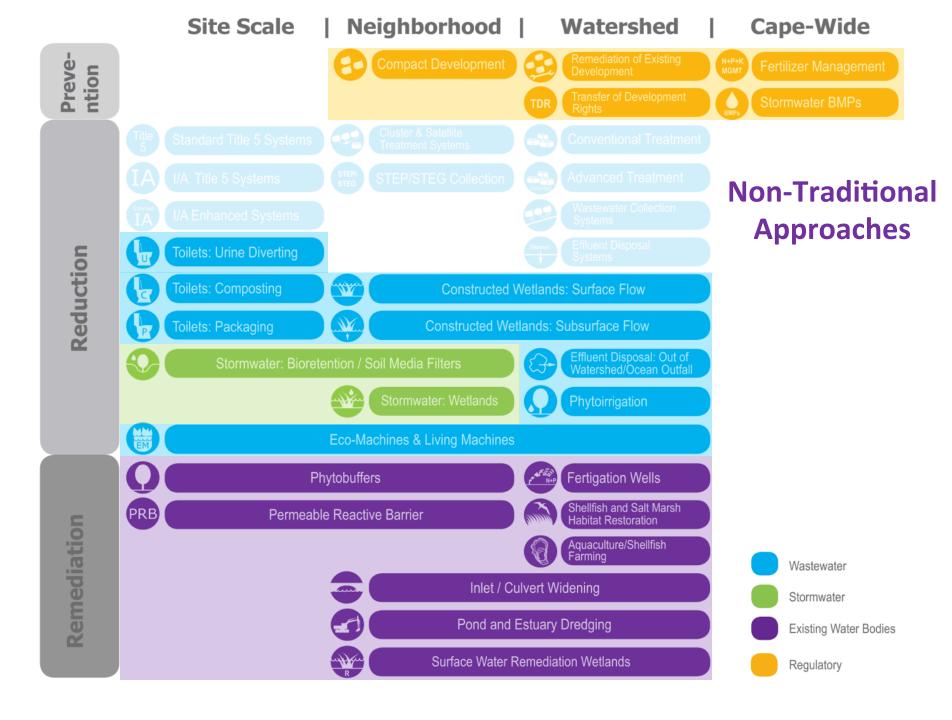

## **208 Planning Process**

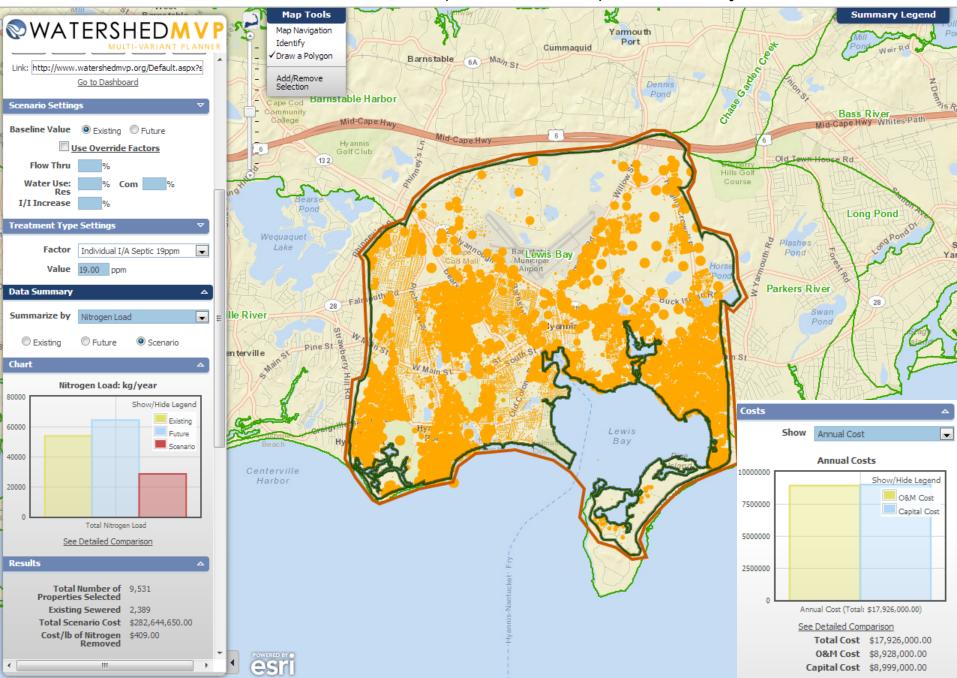

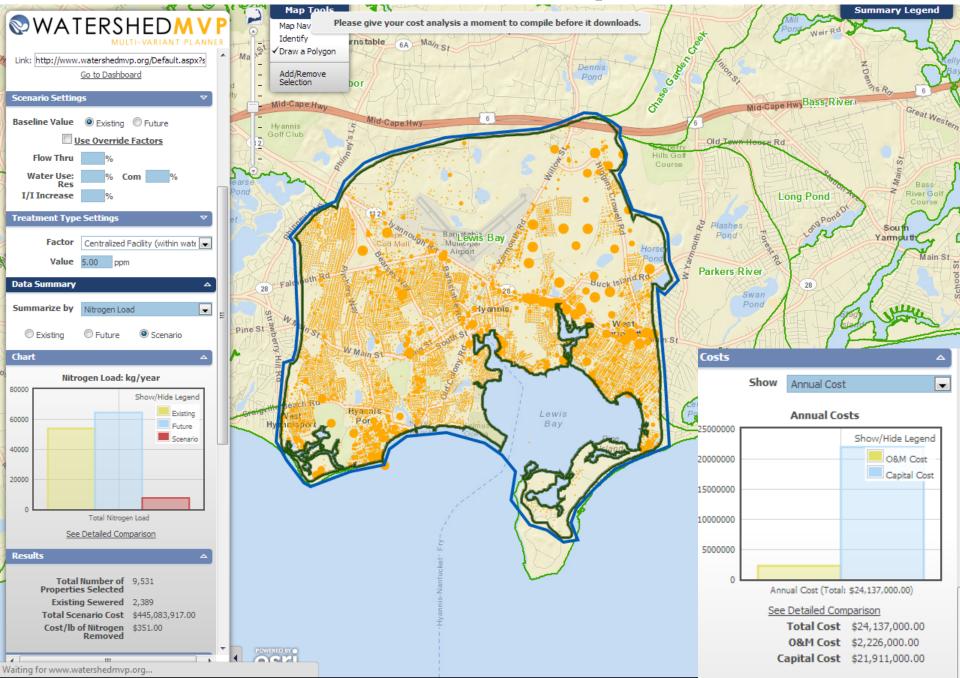

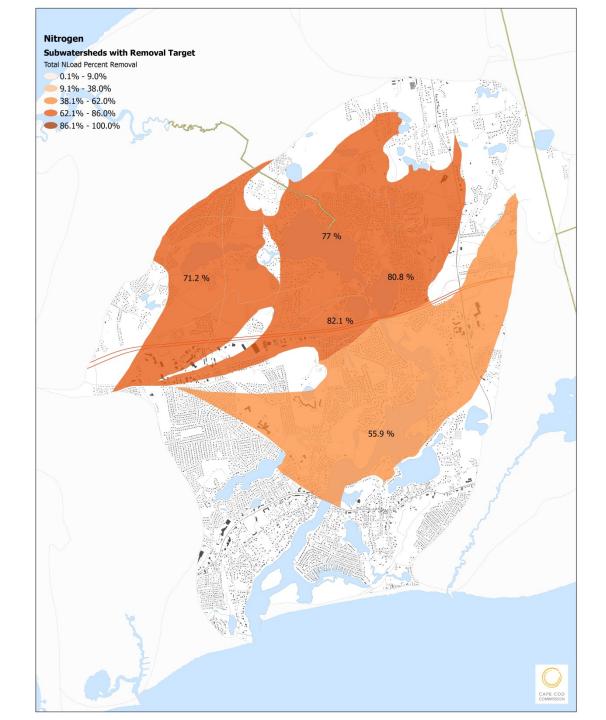

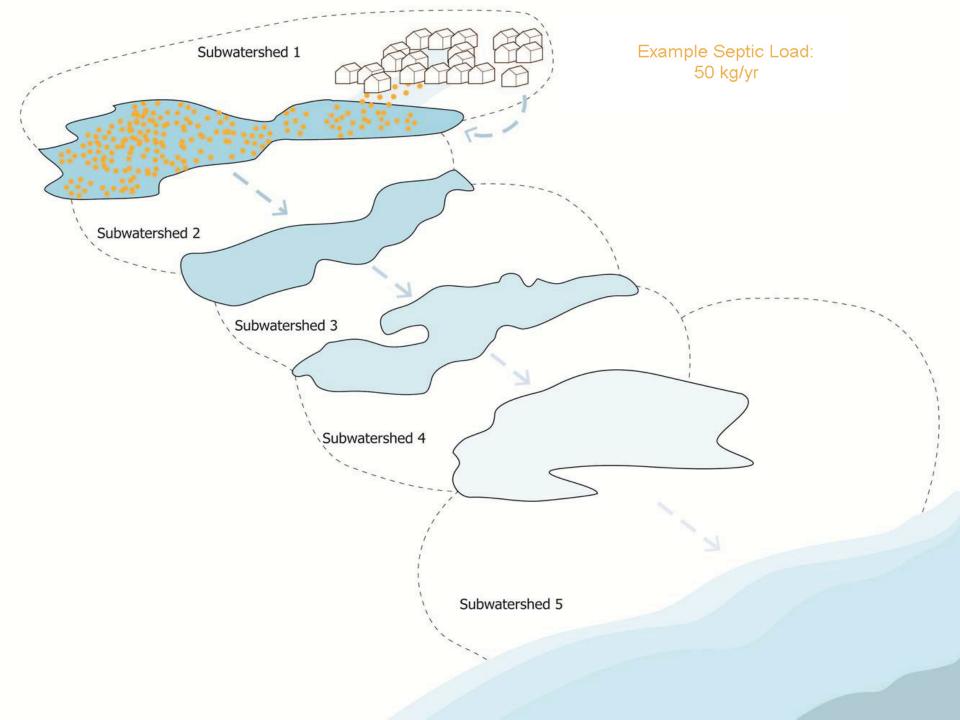

#### Watershed-Wide Innovative/Alternative (I/A) Onsite Systems

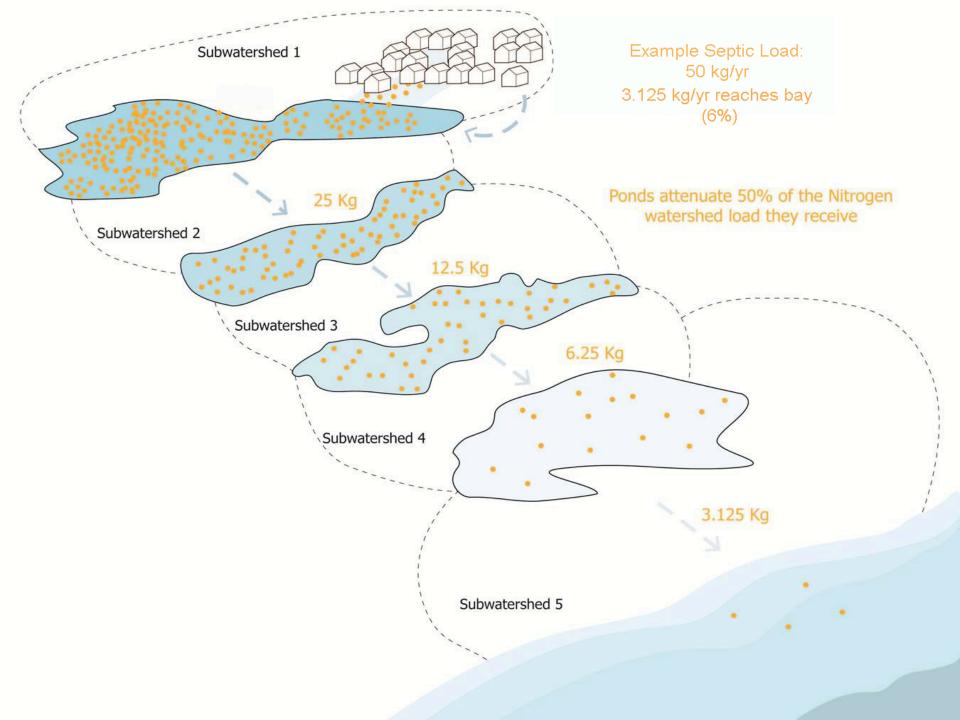

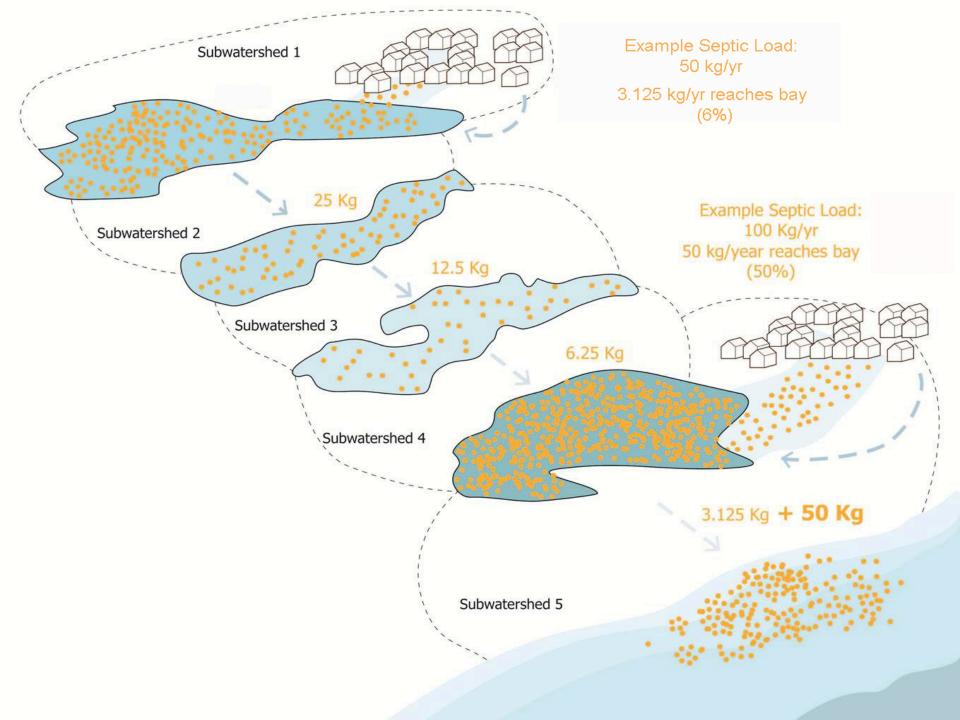

#### Watershed-Wide Centralized Treatment with Disposal Inside the Watershed

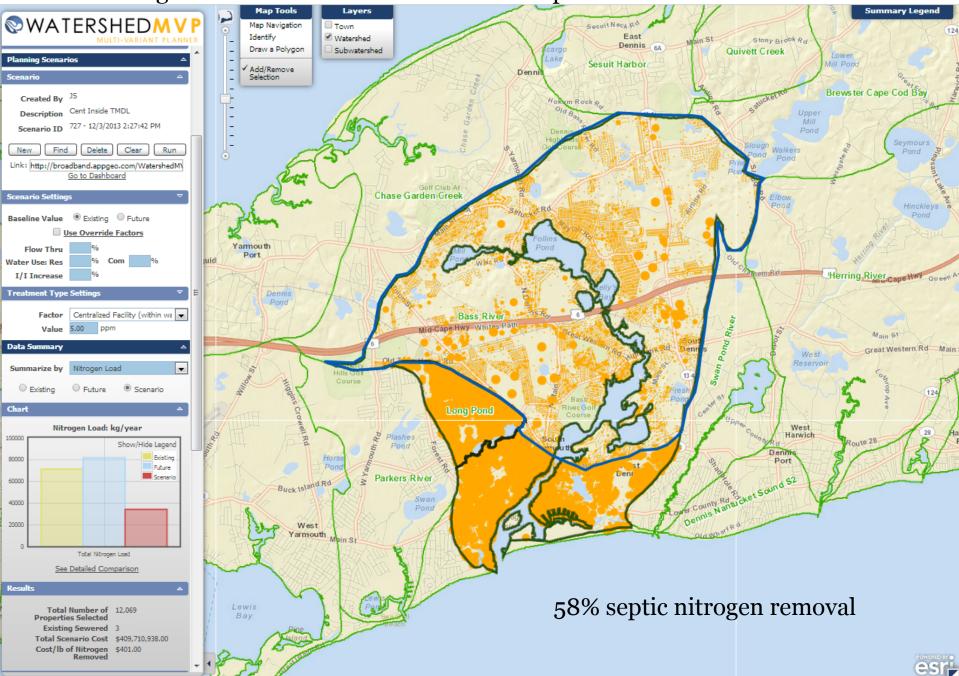

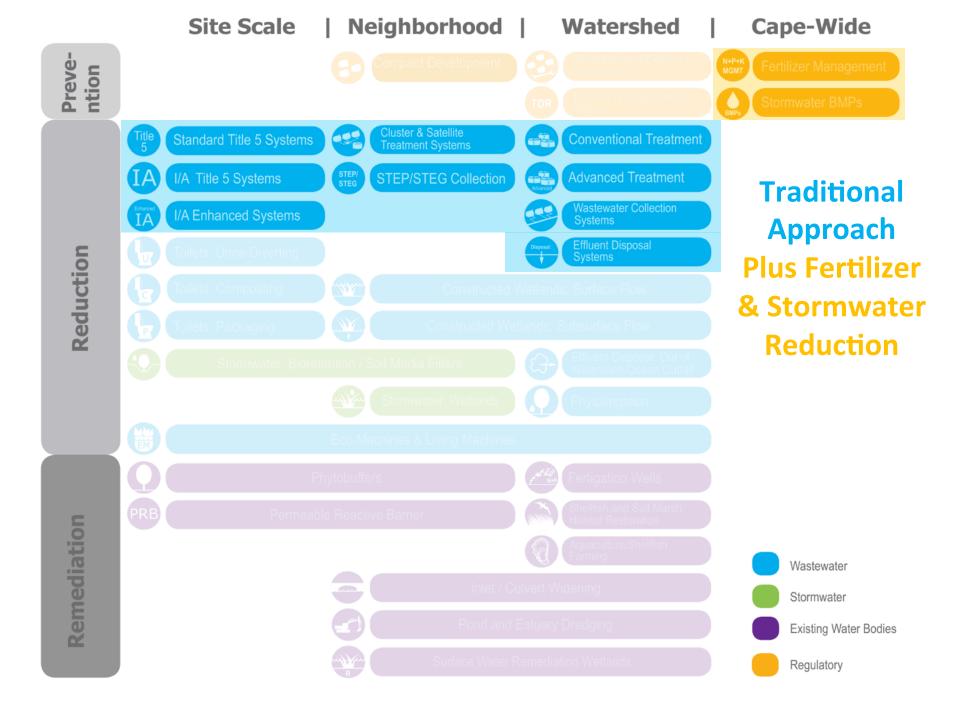

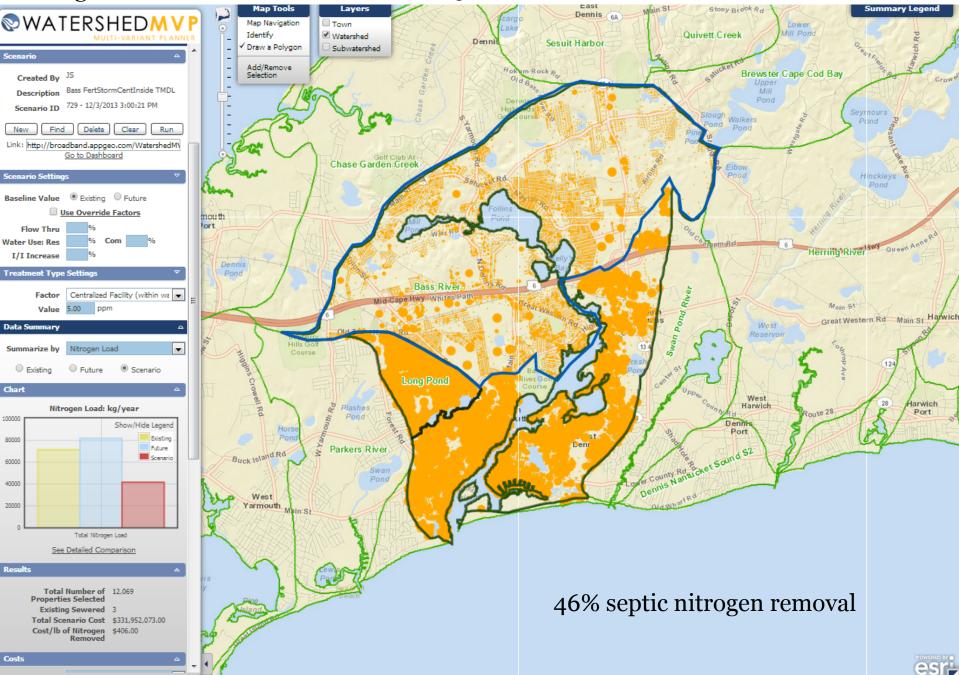

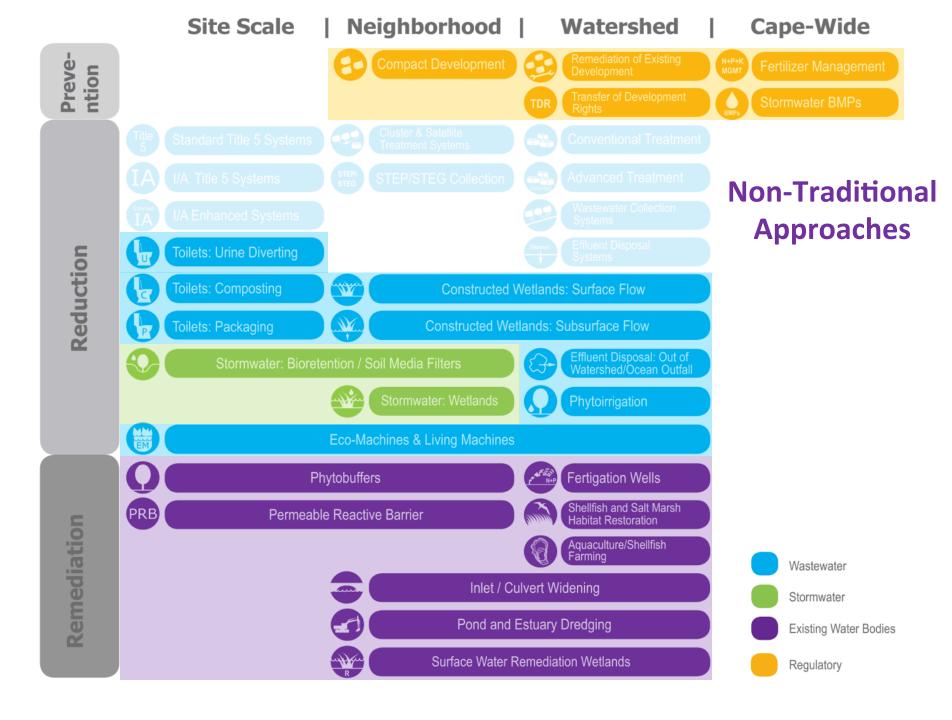

#### Targeted Centralized Treatment with Disposal Inside the Watershed

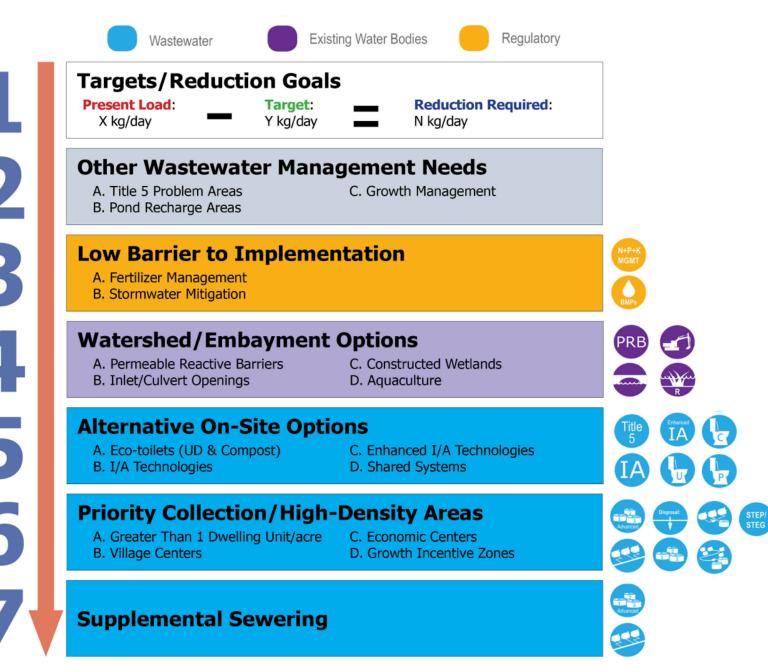

#### Targeted Centralized Treatment with a 50% Reduction in Fertilizer and Stormwater

| MEP Targets and Goals:<br>Present Total Nitrogen |      | kg/day | Nitrogen (kg/yr) |
|--|------|--------|------------------|
| Load:  |      | 0      | 79,497           |
| wastewater                                       |      | 0      | 66,905           |
| fertilizer                                       |      |        | 6,296            |
| stormwater                                       |      |        | 6,296            |
| Target Nitrogen Load:                            |      | 0      | 41,756           |

#### Targeted Centralized Treatment after Applying Alternative Strategies (12273 kg N/yr)

## **Scenario Comparison**

# <section-header>

Targeted Collection after a 50% reduction in fertilizer and stormwater Targeted Collection after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

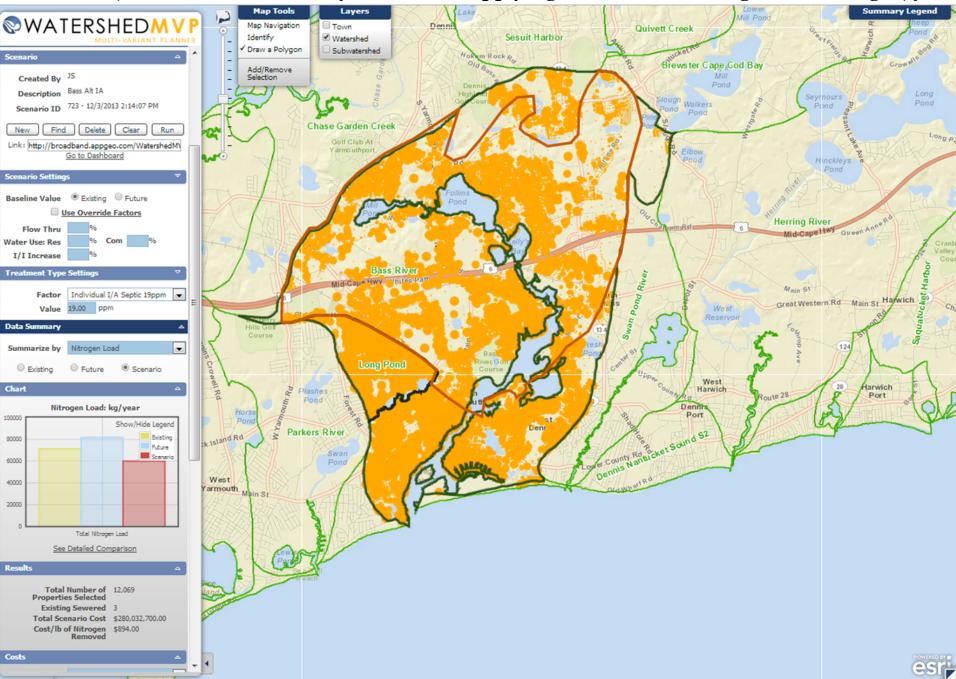

- Achieves TMDL<sup>1</sup>
- ➢ Total Cost = \$410 Million
- ≻ Cost/lb N = \$401
- ➤ Treated Flow = 1,316,000 gpd

- Achieves TMDL<sup>1</sup>
- ➤ Total Cost = \$332 Million
- ≻ Cost/lb N = \$406
- Treated Flow = 1,055,000 gpd

- Achieves TMDL<sup>1</sup>
- $\succ$  Total Cost = \$135 Million
- ➤ Cost/lb N = \$405
- ➤ Treated Flow = 397,000 gpd

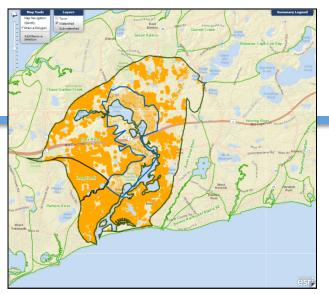

<sup>1</sup> within 5% of goal

#### Innovative/Alternative On-Site Systems after Applying Alternative Strategies (12273 kg N/yr)

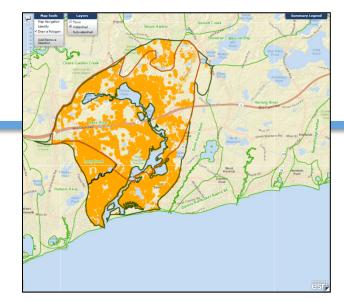

## **Scenario Comparison**

Targeted Collection after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

- Achieves TMDL<sup>1</sup>
- > Total Cost = \$135 Million
- ≻ Cost/lb N = \$405
- ➤ Treated Flow = 397,000 gpd

Innovative/alternative on-site systems after a 50% reduction in fertilizer and stormwater & after applying alternative approaches

- Achieves TMDL<sup>1</sup>
- Total Cost = \$280 Million
- ➤ Cost/lb N = \$894
- $\succ$  Treated Flow = 1,172,000 gpd

<sup>1</sup> within 5% of goal

# Adaptive Management:

A structured approach for addressing uncertainties by linking science and monitoring to decision-making and adjusting implementation, as necessary, to increase the probability of meeting water quality goals in a cost effective and efficient way.

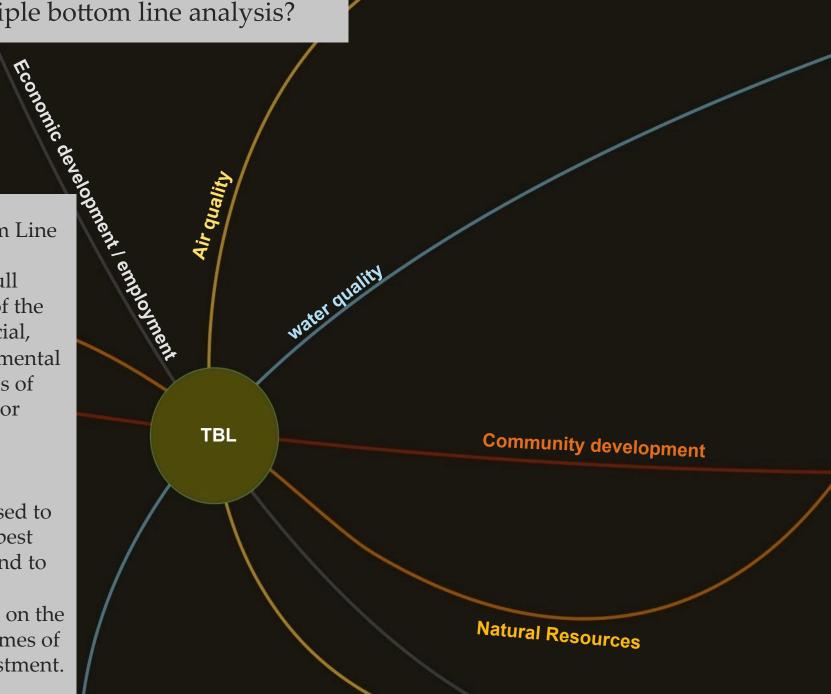

# Triple Bottom Line (TBL) Introduction

#### What is triple bottom line analysis?

**Triple Bottom Line** Analysis Provides a full accounting of the financial, social, and environmental consequences of investments or policies

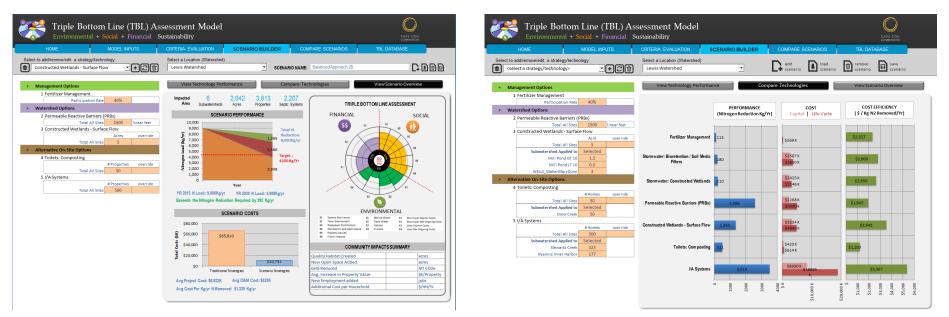

Often "TBL" analysis is used to identify the best alternative and to report to stakeholders on the public outcomes of a given investment.

# Why develop a TBL model?

- To consider the financial, environmental, and social consequences of water quality investments and policies in Cape Cod.
- TBL Model evaluates the "ancillary" or downstream consequences of water quality investments not the direct Phosphorous or Nitrogen levels.
