208 Area Wide Water Quality Management Plan Update
Mid Cape Sub Regional Group

Meeting Two
April 1, 2014 8:30 am – 12:30 pm
Cape Cod Commission, 3225 Main Street, Barnstable

Meeting Goals:
• Understand the Triple Bottom Line analysis to evaluate scenario planning
• Identify key criteria for successful collaboration for shared watersheds and evaluate existing models against those criteria
• Clarify the scope and charge of the Ad Hoc Monitoring Committee to meet permitting requirements and water quality goals
• Visualize monitoring within an adaptive management approach

8:30 Welcome & Review of 208 Goals
• Introductions, Agenda Overview & Goals of Today’s Meeting

8:45 Scenario Planning
• Overview of scenarios in all shared watersheds.
• Use TBL model to discuss various options for each watershed.

9:15 Regulatory, Legal, and Institutional Interactions
• Review challenges and opportunities for collaboration across shared watersheds
• Examine and evaluate tools for watershed collaboration from across the state

10:45 Break

11:00 Implementation
• Identify existing monitoring and proposed monitoring approaches for each of the technologies and monitoring in the water bodies for TMDL compliance.

12:15 Public Comment

12:30 Adjourn
Mid Cape Sub Regional Group
Standing Sub Regional Meeting Topics

**Scenario Planning**
- Mtg. 1: One representative watershed
- Mtg. 2: All shared watersheds & TBL model
- Mtg. 3: Subregional scenarios & TBL model

**Regulatory, Legal, Institutional**
- Challenges & opportunities associated with permitting the watershed scenario

**Implementation**
- Adaptive management plans
- Tools to support intermunicipal cooperation
- Structures for permitting
- Financing & affordability

"Subregional Working Group - Mid Cape - Workshop 2"
Standing Sub Regional Meeting Topics

Meeting 2 Goals:

• Introduce the **Triple Bottom Line** analysis tool and its application to scenario planning
• Identify key criteria for **successful collaboration** for shared watersheds and evaluate existing models against the criteria
• Clarify the scope and charge of the **Ad Hoc Monitoring Committee** to meet permitting requirements and water quality goals
• Visualize **monitoring** within an adaptive management approach
Scenario Planning

458 Ecotoilets
700 Ecotoilets-Public (people)
THREE BAYS TRIPLE BOTTOM LINE ASSESSMENT

Community Goals

Please set watershed-wide thresholds for the performance factors below. All scenarios for the watershed will be scored against these thresholds.

1. Development Buildout Timeframe
   The estimated time when Development in the watershed will reach capacity as planned by current zoning
2. Min. % of TMDL Goal achieved in 20 years
   The acceptable level of Nitrogen reduction for a viable scenario within a reasonable timeframe
3. Max. % of HH as 208 Plan Wastewater Management Fee
   The acceptable burden on households measured as a % of Median Household Income (MHI)
4. Max. average Capital Cost of On-Site Improvement per HH
   The acceptable burden on households investing in 208 plan water on-site improvements
5. Min. % of Properties in Watershed improving in Value
   The minimum % of properties expected to gain in value due to 208 plan improvements
6. Min. % of High Quality Habitat Created in Watershed
   The minimum % of High quality habitat being added to the existing habitat areas with the watershed
7. Min. % of GHG Emission Reduction from Wastewater sector
   The minimum % reduction of GHG compared to 2002 levels from wastewater sector
8. Min. % New Jobs Created in Watershed
   The minimum % of new jobs created in the construction, maintenance and rate-payer sectors
9. Min. Concentration Reduction of Phosphorous
   The minimum amount of phosphorous concentration reduction in fresh water ponds (Kg/acre/yr)
10. Min. % of TMDL Target Achievement 20 Years
    The minimum extent to which a scenario achieves TMDL target in a specific time frame
11. Min. % Number of Property Gains Property Value
    The minimum % number of properties estimated to be increase in property value with the watershed
12. Min. % Value of Property Gain Property Value
    The minimum % of total property values of properties estimated to be increase in property value with the watershed
13. Min Extent of Development Areas Best Suited for Growth
    The minimum extent to which a scenario guides development to areas best suited for growth
SCENARIO 1: Maximizing Sewer Option
SCENARIO 1: Maximizing Sewer Option

---

**Collection Systems:**
- Main Sewer: 421,894 linear feet
- Sewer Laterals: 201,750 linear feet
- Force Main: 2 miles
- Pump Station: 3 each
- On-Site Pump Station: 1 each
- SEPT - Collection: 1 linear foot
- STEP - Collection: 1 linear foot
- Force Main: 1 linear foot
- On-Site Pump Station: 1 each
- Interior Plumbing: 1 each

**Treatment Systems:**
- Treatment System Included: Yes
- Location within/outside watershed: within
- % capacity for sewershed: 100%
- Treatment Facility Type: Advanced

**Effluent Disposal:**
- Infiltration Basins
- Soil Absorption System (SAS)
- Injection Well
- Wick Well
- Ocean Outfall
- Effluent Transport out of Watershed

"Subregional Working Group - Mid Cape - Workshop 2"
SCENARIO 2: Reduced Sewershed
SCENARIO 2: Reduced Sewershed

Note: TBL Financial Indicators Not Shown
SCENARIO 3: Alternate Technology

Triple Bottom Line (TBL) Assessment Model

Current Application Stack: 6 Strategies/Technologies

- Watershed Options
  - W1 Permeable Reactive Barriers (PRBs)
  - W2 Constructed Wetlands - Surface Flow
  - W7 Aquaculture/Shellfish
  - W9 Fertilization Wells
  - W13 Pond and Estuary Dredging

- Alternative On-Site Options
  - A1 Toilets: Composting

View Scenario Overview

Impacted:
- 1,797 Acres
- 1,203 Properties
- 1,203 Septic Systems

Time Slider: 0 to 50 Years

- N Remaining
- N Reduction
- TMDL Target
- Buildout

N Load Reduced: 18,566 Kg/yr
N Load Remaining: 19,711 Kg/yr

Total Number of Properties: 121
Land Area (acres): 110.5
Existing Nitrogen Load (Kg/yr): 869.2
Future Nitrogen Load (Kg/yr): 869.2
Properties Already Sewered: 0
Application Suitability: 121
% Selected: 80%
Properties Impacted: 93
Land Area Impacted: 86.7
Future Nutrient Load Impacted: 792.8

Community Impacts Summary

- Quality Habitat Created: 177.5 acres
- GHG Reduced: 103 MT CO2e/yr
- N Reduction Risk Ratio on Sea Level Rise: 0.2%
- % Properties Increase in Property Value: 16%
- New Employment added: 184 jobs
- Additional Cost per Household: $978/yr
SCENARIO 3: Alternate Technology

SCENARIO COMPARISANS

Note: TBL Financial Indicators Not Shown
Regulatory, Legal, Institutional

COLLABORATION MODELS
JURISDICTION OF THE PROBLEM

Nitrogen:
- Does not follow town boundaries

Watershed based approach:
- Look across entire watershed
- Identify cost-effective, environmentally effective plan to restore estuary
JURISDICTION OF THE SOLUTION

Multi-town collaboration

Shared actions by towns

Collaborative relationships
  • Build successful intermunicipal relationships
  • Begin with existing watersheds
REQUIREMENTS OF CLEAN WATER ACT / EPA

208 plan requirement:
- State must designate one or more waste management agency (WMA)

WMA must be able to:
- Carry out plan
- Manage waste treatment
- Design & construct new, existing works
- Accept/utilize grants
- Raise revenues
- Incur indebtedness
- Assure each town pays its costs
COLLABORATION CHALLENGES
FROM SUB-REGIONAL MEETING 1

Who decides?

Who pays?

Who manages?
COLLABORATION CHALLENGES

- Which solutions to implement and when and how to re-assess?
- Different levels of planning across towns (including approved CWMPs)
- Different town decision-making processes and publics
- Timeline required for building agreement
- Managing disagreement
COLLABORATION CHALLENGES

- Coordinating multiple town funding approval processes
- Applying for and allocating off-Cape funding opportunities
- Differences in willingness/abilities to pay
- Assigning financial responsibility for: capital funding, operation and maintenance, monitoring, data management, reporting
- Managing disagreement
COLLABORATION CHALLENGES

- Preparing the watershed plan for permitting
- Building, operating, maintaining, monitoring, and reporting
- Ultimate responsibility for water quality outcomes
- Managing disagreement

Who decides?  Who pays?  Who manages?
WHAT ARE WE MISSING?

WHAT ARE THE CHARACTERISTICS/CRITERIA OF A SUCCESSFUL COLLABORATION?
INTERMUNICIPAL AGREEMENTS

What is it?
Written agreement between municipalities to perform services or activities

Authority:
M.G.L. c. 40 § 4A

What it does:
Allows towns to contract with each other/other government units (RPA, water/sewer com)

Types:
1. Formal contract
2. Joint service agreement
3. Service exchange arrangements

Key Considerations:
• Modified authority enables Board of Selectmen rather than Town Mtg.
• Max. 25 years
• Establishes maximum financial liability of parties
• Components:
  • Purpose, term of agreement
  • Method of financing
  • Responsibilities
  • Costs of services
  • Indemnification
  • Insurance
  • Alternative dispute resolution
  • Personnel property
ATTLEBORO - NORTH ATTLEBOROUGH

The Situation:

• Town and City have common borders
• Sewer services could be more efficiently provided by connecting neighborhoods in the Town to the City’s existing treatment facility and City neighborhoods to the Town’s facility

Why the solution was chosen:

• Mutually beneficial
• Allows the towns to contract with each other for specific geographic areas
ATTLEBORO - NORTH ATTLEBOROUGH

**Who decides?**
- Town of North Attleborough through its Board of Public Works
- City of Attleboro through its Mayor and Municipal Council

**Who pays?**
- Apportioned to the ratepayers in the City and Town on basis of their contributions

**Who manages?**
- Each town manages their treatment facility independently
- Both entities can review and reject proposed changes to the other’s infrastructure
FEDERAL/MUNICIPAL PUBLIC-PUBLIC PARTNERSHIPS

What is it?
Shared service agreement

Authority:

What it does:
Authorizes DoD Secretary to enter into intergovermenttal support agreements with state/local governments

Examples:
Towns may seek to utilize capacity from wastewater facility on Joint Base Cape Cod

Key considerations:
- Must serve best interest of the state/local government and military
- Provides mutual benefits not achieved on own
- Benefit may be monetary or in-kind
- May be entered into on sole source basis
- May be for a term not to exceed 5 years
- Towns enter into partnership agreement with JBCC
Situation:
• Air Force was seeking to exchange underutilized assets in excess land
• City of North Las Vegas needed land to build a Water Reclamation Facility
• In exchange for leasing property, the Air Force received in-kind consideration in the form of a fitness center and water supply infrastructure

Why the solution was chosen:
• Mutual benefit to both Air Force and city
• Achieved a common purpose
• Enabled the city to build a 25 million gallon/day facility with ability to expand (double size) for future growth
NELLIS AIR FORCE BASE

<table>
<thead>
<tr>
<th>Who decides?</th>
<th>Who pays?</th>
<th>Who manages?</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Strategic Asset Utilization Division, or CIU for Air Force negotiates agreement for Air Force</td>
<td>• No money was exchanged</td>
<td>• City of North Las Vegas built facilities in accordance with the lease agreement</td>
</tr>
<tr>
<td>• Mayor of City of North Las Vegas for the city</td>
<td>• In-kind benefit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Exchange of Air Force’s excess land for receipt of use of fitness center and onsite infrastructure</td>
<td></td>
</tr>
</tbody>
</table>
INDEPENDENT WATER AND SEWER DISTRICTS

What is it?
Independent public instrumentality for establishing shared water/sewer systems

Authority:
M.G.L. c. 40N §§ 1-25

What it does:
One or more municipalities may join to form a regional water and sewer district

Requirement:
Town meeting vote required to establish/operate

Key considerations:

• Special unpaid district planning board for two or more towns forms to study advisability, construction and operating costs, methods of financing, issues report
• May submit proposed agreement for town meeting vote which shows:
  • Number, composition method of selection of members of board
  • Municipalities to be within district
  • Method of apportioning expenses
  • Terms by which town is admitted or separated from district
  • Detailed procedure for preparation/adopter of budget
GREATER LAWRENCE SANITARY DISTRICT

The Situation:
• A 1963 report on Merrimack River pollution called for several facilities in key areas, including one for these four communities

Why the solution was chosen:
• A sewer district was among the recommendations in the 1963 report
GREATER LAWRENCE SANITARY DISTRICT

Who decides?
- Approved by Town Meeting and City Councils in each community

Who pays?
- Annual assessment to member communities, not users
  - Full bonding powers

Who manages?
- 7-member commission appointed on a population basis by member communities
WATER POLLUTION ABATEMENT DISTRICTS

What is it?
District designated by Mass DEP for one or more towns (or designated parts) established for the “prompt and efficient abatement of water pollution”

Key considerations:
- Adopt bylaws/regulations
- Acquire, dispose of and encumber real/personal property
- Construct, operate and maintain water pollution abatement facilities
- Apportion assessments on the member municipalities
- Issue bonds and notes, raise revenues to carry out the purposes of the district
- Member municipalities may then impose assessments on residents, corporations and other users in the district
- If town fails to pay its share, state may pay it for them out of other funds appropriated to that town

Authority:
Massachusetts Clean Waters Act (M.G.L. c. 21, §§28-30, 32, 35, 36).

What it does:
Creates district responsible for abatement plan

Types:
1. Town voted district
2. DEP voted district
UPPER BLACKSTONE WATER POLLUTION ABATEMENT DISTRICT

**The Situation:**
- Blackstone River was the recipient of industry toxins
- In 1968, the Legislature passed an emergency law for the immediate preservation of the public safety and welfare to create the Upper Blackstone Water Pollution Abatement District

**Why the solution was chosen:**
To enable the City of Worcester and the Towns of Auburn, Boylston, Holden, Leister, Millbury, Oxford, Paxton, Rutland, Shrewsbury and West Boylston to create a sewer district
UPPER BLACKSTONE WATER POLLUTION ABATEMENT DISTRICT

Who decides?
- City of Worcester by its City Council
- Towns of Auburn, Boylston, Holden, Leister, Millbury, Oxford, Paxton, Rutland, Shrewsbury and West Boylston by Town Meeting

Who pays?
- Apportioned among the city/towns on basis of their contributions to the flow entering the district’s facilities

Who manages?
- The District, which is governed by a Board comprised of one member from each district
INDEPENDENT PUBLIC AUTHORITY

What is it?
Could create separate legislative entity

Authority:
Mass. Legislature

What it could do:
Create construct that provides for funding mechanisms outside town meeting

What it could potentially do:
• Plan, build, finance, own and operate certain wastewater collection treatment, disposal and septage management assets and programs
• Research, develop, own and operate non-traditional wastewater treatment assets and programs
• Provide services for residential WW systems
• Plan and protect drinking water resources on Cape Cod through protection plans and policies
• Develop and enforce policies and procedures governing customer metering, billing and collection systems
The Situation:

- Federal District Court in Massachusetts ruled that wastewater discharged into the Boston Harbor was in violation of the 1972 Federal Clean Water Act requirements.
- Court ordered MWRA to develop and implement a program to provide treatment of its wastewater as required by that law.

Why the solution was chosen:

In accordance with the court-ordered schedule, MWRA undertook a program of improvements to the wastewater collection and treatment facilities serving the metropolitan Boston area.
The Massachusetts Water Resources Authority (MWRA) was established by Chapter 372 of the Acts of 1984 to assume the duties and responsibilities of the Metropolitan District Commission’s Water and Sewer Division.

The Authority has its own powers to issue bonds and assessments to pay expenses.

Board of Directors, consisting of 11 members, who are deemed to act on behalf of the independent authority to perform “an essential public function.”
Regional Health District

**What is it?**
Regional Board of Health

**Authority:**
M.G.L. c. 111 §27B

**What it does:**
Has all the powers and duties of boards of health/health department of a town
Includes wastewater regulatory powers of Board of Health

**Who may belong:**
One or more towns

---

**Key Considerations:**

- Can form by votes of two or more boards of health and their respective town meeting to delegate some/all of its legal authority to regional board
- Estimate budget each December, assessor then includes this amount in the tax levies each Board may order treasurer to pay town's share of cost/expense of the district
- Reimbursement from Commonwealth for "initial capital outlays"
- Subj. to appropriation – Requires matching funds from town
- HB 3822 – proposes removal of town meeting requirement
Quabbin Regional Health District

The Situation

• Quabbin Health District formed in response to issues occurring in Belchertown, Ware, and Pelham.
• Issues included a hazardous landfill, lack of oversight and consistency in providing required public health services, citizen complaints, septic issues, and concerns from MDPH and DEP around the communities' inability to address state mandates.

Why the solution was chosen:
Joint effort by the towns to provide their town with quality public health professionals and services in response to problems.
Quabbin Regional Health District

Who decides?
- Established by town meeting vote by the towns of Belchertown, Ware and Pelham

Who pays?
- Towns of Belchertown, Ware and Pelham jointly

Who manages?
- Towns of Belchertown, Ware and Pelham jointly
HOW WELL DO EACH OF THESE MODELS MEET THE CRITERIA FOR EFFECTIVE COLLABORATION?

HOW WELL WOULD EACH OF THESE MODELS ADDRESS THE SITUATION ON THE MID CAPE AND CAPE COD?
**COLLABORATION CHALLENGES**
FROM SUB-REGIONAL MEETING 1

**Who decides?**
- Which solutions to implement and when and how to re-assess?
- Different levels of planning across towns (including approved CWMPs)
- Different town decision-making processes and publics
- Timeline required for building agreement
- Managing disagreement

**Who pays?**
- Coordinating multiple town funding approval processes
- Applying for and allocating off-Cape funding opportunities
- Differences in ability & willingness to pay
- Assigning responsibility for: capital funding, operation and maint., monitoring, data mgt., reporting
- Managing disagreement

**Who manages?**
- Preparing the watershed plan for permitting
- Building, operating, maintaining, monitoring, and reporting
- Ultimate responsibility for water quality outcomes
- Managing disagreement
Implementation

MONITORING
Mission:
To provide advice and guidance on appropriate monitoring protocols for technology efficiency and total maximum daily loads, while identifying a process for consolidating all available monitoring data in a central location and format.
Roles and Responsibilities:

- Establish performance monitoring protocols for technologies that may be a part of watershed permits in the future.
- Establish compliance monitoring protocols for meeting total maximum daily loads (TMDLs) in the water body.
- Establish process and structure for consolidating and cooperation of existing monitoring programs and data into a centralized location.
- Identify region-wide monitoring needs and develop proposals.
SECTION 208 AREA WIDE WATER QUALITY MANAGEMENT PLAN

MONITORING SUBCOMMITTEE

Invited Members:
DEP, EPA, Provincetown Center, WBNERR, Town Rep, Academics, SMAST, CCC, Institution/Agency
