Comment

As a full time resident on Cape Cod, I am writing to express concern over the AGT pipeline request for expansion, not just relocation. Their proposal will increase the capacity for bringing fracked gas onto CC. The CC Commission has set clear goals towards decarbonization and Net Zero as outlined in the Climate Action Plan. This expansion also runs counter to Cape Cod's Regional Policy Plan.

As our communities invest in solar panels and heat pumps for our homes and businesses, in electric vehicles towards clean energy goals for 2035 and beyond, there is no need for increased access to gas. It contradicts the efforts and intentions of local initiatives to comply with fossil fuel reduction efforts. Creating power from gas increases greenhouse gas emissions from leakage and use, and causes environmental and health damages. It undermines the effort being made to increase access to power generated by sustainable sources and decrease power generated from gas and coal.

Thank you for your careful consideration of the voice of the people on this issue.

Sincerely,

Deborah Ennis
