Given the strong commitment to our Regional Policy Plan and Climate Action Plan, I ask that the Cape Cod Commission inform the community as much as possible and use your authority to:

A) Require AGT to quantify and mitigate expansion potential (though they say they can't expand, we need an accountable written commitment that they will not expand)

B) AGT needs to be accountable to measure and communicate credible calculations of carbon emission impacts. This must include fuel sourcing, leakage of methane, combustion of gas, and any other emissions that flow from this project.

I implore the Cape Cod Commission to consider the public health impacts of (potentially) expanding gas use on the Cape in addition to living by the RPP and CAP. We are already at risk of missing the State's greenhouse gas emission reduction goals, and need to stand strong as a region- the future of our children and all life on this fragile land depend on us. Let us keep this special place special.
